**DEPARTMENT OF COMPUTER SCIENCE
TIRUPATTUR - 635901A CRM APPLICATION FOR
THE CHAI SHOP & CO**

User Story:

As a sales representative at TheChaiShop&Co, I want to efficiently manage customer relationships and streamline sales processes using our CRM application.

I want to easily access and update employer details, as well as distinguish between online and offline customer records using record types, allowing for personalized interactions.

Additionally, I need the application to automate sales calculations, such as order quantity and total bill amount, to ensure accurate and efficient transactions.

Moreover, I require the ability to generate insightful reports and dashboards to summarize and analyze sales data effectively, aiding in decision-making and strategy development.

Lastly, I would like the application to automate email notifications to customers on their birthdays, informing them of special offers tailored to celebrate their special day, enhancing customer engagement and loyalty.

1. INTRODUCTION

1.1 Project Overview :

The project “A CRM Application for TheChaiShop&Co” focuses on developing a Salesforce-based Customer Relationship Management (CRM) system to manage customer, employer, and enterprise accounts efficiently. The system automates sales processes, maintains customer records, generates reports, and improves customer engagement through automated notifications.

The project user story and objectives are defined in the initial section of the document

1.2 Purpose :

The purpose of this project is to:

- **To maintain customer details and contact information.**

- To manage customer orders and purchase history.
- To track sales and customer interactions.
- To provide better and faster customer service.
- To help the shop understand customer preferences.
- To manage products and stock efficiently.
- To generate useful reports for business management.
- To improve customer satisfaction and encourage repeat customers.

IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Sales Representative	Manage customer orders and billing	Calculations are often incorrect	Order quantity and billing are manual	Stressed and inefficient
PS-2	Store Manager	Monitor sales and customer records	Reports are delayed and incomplete	Data is stored in multiple files	Confused and dissatisfied
PS-3	Customer	Receive personalized offers and updates	I do not get timely notifications	There is no automated communication	Disconnected and undervalued

Problem Statements – TheChaiShop&Co CRM Application

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1		Manage customer orders and billing	Calculations are often incorrect	Order quantity and billing are manual	
PS-2	 Sales Representative	Monitor sales and customer records	Reports are delayed and incomplete	Data is stored in multiple files	Stressed and inefficient 
PS-2		Monitor sales and customer records	Reports are delayed and incomplete	Data is stored in multiple files	Confused and dissatisfied 
PS-3	 Customer	Receive personalized offers and updates	I do not get timely notifications 	There is no automated communication	Disconnected and undervalued 

2.2 Empathy Map Canvas

Target Users

- Sales Representatives
- Managers
- System Administrators
- Business Analysts

Empathy Analysis

Aspect	Description
Think & Feel	Need accurate customer data and reports
Hear	Feedback from management
See	Multiple registers and spreadsheets

Say & Do	Enter data manually
Pain	Errors, delays, data loss
Gain	Automation, fast reports

2.3 Brainstorming

Brainstormed Ideas

- Manual CRM system
- Excel-based management
- Web-based CRM
- Salesforce-based CRM
- Automated email system

Selected Idea:

Salesforce-based CRM Application for TheChaiShop&Co..

3.REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Journey Stages:

- Login
- Access CRM Application
- Enter Customer Data
- Generate Orders
- Calculate Bills
- View Reports
- Decision Making

3.2 Solution Requirements

Functional Requirements

FR No	Requirement
FR-1	User Login
FR-2	Object Creation
FR-3	Data Entry
FR-4	Billing Automation
FR-5	Report Generation
FR-6	Email Automation

Non-Functional Requirements

NFR-1: Usability

The system should be easy to use for sales representatives, managers, administrators, and analysts without requiring technical training.

Requirements :

- Simple and intuitive user interface
- Clear navigation menus
- Easy-to-understand forms
- User-friendly dashboards

Example:

A new sales employee should be able to log in, enter customer details, and generate orders within a few minutes without help.

Salesforce Lightning UI provides drag-and-drop features and easy navigation.

NFR-2: Security

The system must protect customer and business data from unauthorized access.

Requirements:

- Role-based access control
- Secure login authentication
- Encrypted data storage
- Data backup and recovery

Examples:

- Profiles and permission sets
- Object-level and field-level security
- Restricted billing access
- Secure login and password policies

NFR-3: Reliability

The CRM system should work correctly at all times and store data accurately without loss.

Requirements:

- Automatic data saving
- Regular system backups
- Error handling mechanisms
- Stable cloud environment

Example :

If a user enters order data and the internet disconnects, the system should save the information and restore it later.

Salesforce cloud ensures automatic backups.

NFR-4: Performance

The system should respond quickly and handle large amounts of data efficiently.

Requirements:

- Fast page loading
- Quick report generation
- Smooth dashboard rendering
- Minimal delay

Example: When a manager generates monthly sales reports for hundreds of customers, the report should load within 2–3 seconds.

Optimized queries and caching improve speed.

NFR-5: Availability

The system should be accessible whenever required.

Requirements:

- 24/7 system availability
- Minimal downtime
- Cloud-based hosting
- Disaster recovery

Example: Managers should be able to access the CRM system during peak business hours, weekends, or late nights.

Salesforce cloud provides high uptime.

NFR-6: Scalability

The system should support business growth without affecting performance.

Requirements:

- Ability to handle more users
- Support increasing customer data
- Expandable storage
- Maintain system speed

Example: If TheChaiShop&Co expands to multiple branches, the CRM system should support thousands of customers without slowing down.

Salesforce infrastructure automatically scales.

3.3 Data Flow Diagram

User → Salesforce UI → Custom Objects → Validation Rules → Flows → Reports → Dashboards.

3.4 Technology Stack

Layer	Technology
Frontend	Salesforce Lightning
Database	Salesforce Cloud
Automation	Flows
Backend	Salesforce Platform
Analytics	Reports & Dashboards

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The CRM system replaces manual records with automated data management. Cloud storage prevents data loss, dashboards improve analysis, and real-time reports eliminate delays. This ensures accurate and timely business insights generation.

4.2 Proposed Solution

Functional Requirements

Parameter	Description
User Login & Authentication	Allows authorized users to securely log in to the CRM system using valid credentials.
Customer Record Management	Enables users to create, view, update, and delete customer details such as name, contact number, and address.
Employer & Enterprise Management	Allows management of employer and enterprise account information for business operations.
Order Management	Supports creation and tracking of customer orders, including order quantity and product details.
Automated Billing System	Automatically calculates total bill amount using formula fields based on order quantity and pricing.
Validation Rules	Ensures accurate data entry by validating fields such as phone number, PAN, and Aadhaar.
Record Types & Page Layouts	Provides different record types and layouts for various customer and enterprise categories.
Global Picklists	Maintains standardized values for fields such as product type, category, and status.
Email Notification System	Sends automated emails to customers for birthdays, offers, and order confirmations.
Workflow & Flow Automation	Automates tasks such as updating records and triggering alerts using Salesforce Flows.
Report Generation	Generates detailed reports on sales, customers, and enterprise performance.
Dashboard Visualization	Displays real-time analytics through interactive dashboards and charts.
Data Backup & Recovery	Ensures secure storage and recovery of business data in the Salesforce cloud.
User Role Management	Controls system access using profiles and permission sets for different users.

4.3 Solution Architecture

Architecture Layers

1. Presentation Layer – Lightning UI
2. Application Layer – Flows and Logic
3. Data Layer – Custom Objects
4. Analytics Layer – Reports and Dashboards

This layered architecture ensures modularity, scalability, and maintainability.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- The project followed an Agile-based development approach with defined milestones and sprints.
- A Salesforce Developer account was created to set up the development environment.
- Custom objects were designed to store customer, employer, and enterprise data.
- Custom tabs and a Lightning Application were developed for easy system navigation.
- Fields, relationships, and global picklists were configured to ensure data consistency.
- Page layouts and record types were created based on user roles and customer categories.
- Validation rules were implemented to prevent incorrect data entry.
- Email templates and automated flows were developed for customer notifications.
- Reports and dashboards were created for performance monitoring and analysis.
- Regular sprint reviews and testing were conducted to track progress and resolve issues.
- The project was completed within the planned timeline through systematic scheduling.

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Developer Setup	USN-1	As an admin, I want to create a Salesforce developer account so that I can configure and deploy the TheChaiShop&Co CRM application.	1	High	THIRUMALAI A
Sprint-1	Data Modeling	USN-2	As an admin, I want to create Customer, Employer, and Enterprise objects so that business data can be stored and managed systematically.	3	High	THIRUMALAI A
Sprint-2	Data Modeling	USN-3	As a user, I want separate tabs for each object so that I can easily navigate and manage CRM records within the application.	3	High	THIRUMALAI A

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-2	Data Modeling	USN-4	As a manager, I want a dedicated Lightning App so that all CRM operations are accessible from a single dashboard.	3	High	THIRUPATHI V
Sprint-2	Data Modeling	USN-5	As an admin, I want to create customer and order fields so that complete sales and billing details can be captured accurately.	5	Medium	THIRUMALAI A
Sprint-2	Data Modeling	USN-6	As a user, I want customized page layouts for different record types so that only relevant information is displayed during data entry	5	High	BHARATHIDASAN R
Sprint-2	Data Modeling	USN-7	As a manager, I want separate record types for Retail and Enterprise customers so that different business categories can be managed efficiently.	5	Medium	THIRUNAVUKKARRASU V
Sprint-3	Automation	USN-8	As a system, I want to validate customer details and order inputs so that incorrect data entries are prevented.	3	High	THIRUMALAI A
Sprint-3	Automation	USN-9	As a system, I want automated flows to send email notifications so that customers receive timely updates and offers.	5	High	THIRUMALAI A
Sprint-4	Automation	USN-10	As a system, I want to automatically calculate billing amounts so that invoices are generated without manual effort.	5	High	THIRUMALAI A
Sprint-5	Reports	USN-11	As a manager, I want sales and customer reports so that I can monitor business performance and make informed decisions.	4	High	BHARATHIDASAN R
Sprint-6	Dashboards	USN-12	As a manager, I want visual dashboards so that I can quickly analyze sales, customers, and enterprise performance.	4	Medium	THIRUMALAI A

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as Planned End Date)	Sprint Release Date (Actual)
Sprint-1	05	1 Days	22 Sep 2026	22 Sep 2026	05	22 Sep 2026
Sprint-2	10	1 Days	23 Sep 2026	23 Sep 2026	10	23 Sep 2026
Sprint-3	15	3 Days	24 Sep 2026	24 Sep 2026	15	24 Sep 2026
Sprint-4	20	6 Days	22 Sep 2026	24 Sep 2026	20	24 Sep 2026

5. Project Development Phase:

What you'll learn

1. Real Time Salesforce Project
2. Standard and Custom objects
3. Picklist Value sets
4. Types of Fields & their relationships.
5. Page Layouts

Implementation

Milestone 1 - Salesforce developer account creation :

Activity 1: Creating Developer Account:

A Developer org has all the features and licenses you need to get started with Salesforce.

1. Search [Developer.salesforce.com/signup](https://developer.salesforce.com/signup)
2. Enter the following details like First name, last name, Email, Role, Company, Country/Region, Postal code, and Username must be unique.
3. Click sign me up, after a few min you will receive a mail from salesforce org and by using the verify account link you can create your new password.
4. Click save.
5. Search login.salesforce.com

☒ I agree to the [Main Services Agreement - Developer Services](#), [Salesforce Program Agreement](#), and [API Terms of Service](#).

Your free trial may be provisioned on or migrated to Hyperforce, Salesforce's public cloud infrastructure.

I acknowledge, as described in the Developer Documentation: (1) the Developer Edition includes autonomous and other generative AI features; and (2) Salesforce may limit use of those features and the org, and may terminate any org that has been inactive for 45 days.

We value your privacy. To learn more, visit our [Privacy Statement](#).

6. By using username and password you can into the Salesforce org. The homepage will appear below

Milestone 2-Object:

What is an object?

Salesforce objects are database tables that permit you to store data that is specific to an organization. It consists of fields (columns) and records (rows).

Activity 1:

Create a custom object for CRM:

To create a custom object, follow these steps:

- 1. From setup click on object manager.**
- 2. Click create, select custom object.**

3. Fill in the label as " CRM ".

4. Fill in the plural label as " CRM".

5. Record name: CRM Name"

6. Select the data type as "Text".

1. In your Salesforce org, click gear icon on the top left and select Setup to open
2. 7. In the Optional Features section, select Allow Reports and Track Field History.
3. 8. In the Deployment Status section, ensure Deployed is selected.
4. 9. In the Search Status section, select Allow Search.
5. 10. In the Object Creation Options section, select Add Notes and Attachments related list
6. to default page layout.
7. 11. Leave everything else as is, and click Save.

Activity 2:

Creation of Crop object:

1. Click on the gear icon and then select Setup.
2. Click on the object manager tab just beside the home tab.
3. After the above steps, have a look on the extreme right you will find a Create Dropdown click on that and select Custom Object.

- a. On the Custom Object Definition page, create the object as follows:
- b. Label: Crop
- c. Plural Label: Crops
- d. Record Name: Crop Name
- e. Select the data type as "Text".
- f. Check the Allow Reports checkbox
- g. Check the Allow Search checkbox
- h. In the Object Creation Options section, select Add Notes and Attachments related list
- i. Click Save.

3.

The screenshot shows the Salesforce Setup page with the Object Manager tab selected. The 'Create' button is highlighted, and a dropdown menu is open showing 'Custom Object' as the selected option. The 'Custom Object' page is partially visible, showing the 'Label' field set to 'Employer Account' and the 'Plural Label' field set to 'Employer Accounts'. The 'Record Name' field is set to 'Employer Account Name' and the 'Data Type' is set to 'Text'. The 'Optional Features' section is visible, showing checkboxes for 'Allow Reports', 'Allow Activities', and 'Track Field History', all of which are checked. The 'Search Status' checkbox is also checked. The 'Save' button is visible at the bottom.

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

- **Label** : Employer Account
- **Plural Label** : Employer Accounts
- Enter Record Name Label and Format
- Record Name : Employer Account Name
- Data Type : Text
- In **Optional features** : check the boxes for Allow Reports | Allow Activities | Track Field History.
- **Search Status** : check the box for Allow Search.
- Save

Activity 2 : Customer Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
 - **Label** : Customer Account
 - **Plural Label** : Customer Accounts
 - Enter Record Name Label and Format

Record Name : Customer Account Name

Data Type : Text

- **In Optional features** : check the boxes for Allow Reports | Allow Activities | Track Field History.
- **Search Status** : check the box for Allow Search.
- Save

Activity 3 : Enterprise Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

- **Label** : Enterprise Account
- **Plural Label** : Enterprise Accounts
- Enter Record Name Label and Format

Record Name : Enterprise Account Name

Data Type : Text

- **In Optional features** : check the boxes for Allow Reports | Allow Activities | Track Field History.
- **Search Status** : check the box for Allow Search.
- Save

Milestone 3 - Tabs

Activity 1 : Custom tabs creation

1. Go to setup page → type Tabs in Quick Find bar → click on tabs → New (under custom object tab)

2. Select Object (Employer Accounts) → Select the tab style → Next (Add to profiles page) keep it as default → Next (Add to Custom App) uncheck the include tab .

3. Make sure that the Append tab to users' existing personal customizations is checked.

4. Click save.

5. Repeat the same steps for Customer Accounts and Enterprise Accounts.

Milestone 4 - The Lightning App

Activity 1 : Create a lightning app

1. Go to setup page → search “app manager” in quick find → select “app manager” → click on New lightning App.

2. Fill the app name in app details and branding as follow

App Name : TheChaiShop&Co

Developer Name : Auto Populates

Add image optional (if you want to give any image you can otherwise not mandatory) - Add Primary color Hex or leave it to default.

Then click Next.

3. In App options
Navigation style : Standard navigation
Setup experience : setup
Supporters form factors : Desktop and phone
Then click Next
4. In Utility items
Utility Bar alignment : Default
Then click Next.
5. Navigation items
Select the created Custom Objects and required standard objects
 - Customer Accounts
 - Employer Accounts
 - Enterprise Accounts

Reports
Dashboards

2. Under custom object tabs, click New

The screenshot shows the Salesforce Setup interface. The left sidebar has a search bar with 'tabs' and a list of options under 'User Interface', including 'Rename Tabs and Labels' and 'Tabs'. The main content area is titled 'New Custom Object Tab' and shows 'Step 1 of 3: Enter the Details'. It prompts the user to 'Choose the custom object for this new custom tab. Fill in other details.' The form includes a 'New Custom Object Tab' section with a 'Required Information' indicator. It asks to 'Select an existing custom object or create a new custom object now.' The 'Object' dropdown is set to 'Farmer' and the 'Tab Style' is 'Leaf'. There is an optional section to 'Choose a Home Page Custom Link to show as a splash page the first time your users click on this tab.' with a 'Splash Page Custom Link' dropdown set to '--None--'. A 'Description' text area is also present.

6. To Add User Profiles : System Administrator

This screenshot is identical to the one above but includes annotations. A red box highlights the 'Farmer' dropdown in the 'Object' field. Another red box highlights the 'Leaf' dropdown in the 'Tab Style' field. A red box highlights the 'Next' button at the bottom right of the form. The text '7. Click Save & Finish.' is written over the top part of the form. The text 'Milestone 5 : Global Picklist' is written in large, bold, black font across the middle of the page. The text 'Activity 1 : Create Global Picklist' is written in bold, black font below the milestone title. The text '1. In Quick find box search for : Picklist value sets and click New.' is written below the activity title.

The screenshot shows the same Salesforce Setup interface, but the 'Object' dropdown is now set to 'Buyer' and the 'Tab Style' is 'Blank'. The 'Next' button is still visible at the bottom right.

Picklist Value Sets

[Help for this Page](#)

Global picklist value sets let you share the values across objects. Base custom picklist fields on a global value set to inherit its values. The value set is restricted so users can't add unapproved values through the API.

Milestone 6 : Fields & Relationships

Activity 1 : Create Custom fields for Employer Account

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.
2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.
3. From the object manager page, In the Quick Find box, Search for the custom object you just created : **Employer Account**
4. From the sidebar, click Fields & Relationships. Notice that there are already some fields there. Those are the standard fields.
5. Click New to create a custom field. Tip: Before creating a new field, do a quick search to make sure a similar one doesn't already exist.

Formula Return Type

☐ None Selected Select one of the data types below.

☐ Checkbox Calculate a boolean value.
Example: `TODAY() > CloseDate`

☐ Currency Calculate a dollar or other currency amount and automatically format the field as a currency amount.
Example: `Gross Margin = Amount - Cost__c`

☐ Date Calculate a date, for example, by adding or subtracting days to other dates.
Example: `Reminder Date = CloseDate - 7`

☐ DateTime Calculate a date/time, for example, by adding a number of hours or days to another date/time.
Example: `{Next = NOW() + 1}`

☒ Number Calculate a numeric value.
Example: `Fahrenheit = 1.8 * Celsius__c + 32`

☐ Percent Calculate a percent and automatically add the percent sign to the number.
Example: `Discount = (Amount - Discounted_Amount__c) / Amount`

☐ Text Create a text string, for example, by concatenating other text fields.
Example: `{Full Name = LastName & " " & FirstName}`

Enter Formula = Quantity (Number) =

The screenshot shows a formula editor with two tabs: "Simple Formula" and "Advanced Formula". The "Advanced Formula" tab is active. On the left, there is a text area containing a long formula starting with "Quantity (Number) =". The formula is a series of IF statements checking for various products and their quantities. Above the text area, there are buttons for "Insert Field" and "Insert Operator". To the right of the text area, there is a "Functions" panel with a dropdown menu showing "All Function Categories". Below the dropdown, a list of functions is visible, including ABS, ACOS, ADDMONTHS, AND, ASCII, and ASIN. A red box highlights the "Insert Selected Function" button. At the bottom of the text area, there is a "Check Syntax" button and a message: "No syntax errors in merge fields or functions. (Compiled size: 2,269 characters)".

Milestone 7 : Page Layouts

For the personalized field view in Customer Accounts, let's create two page layouts
Online orders and Walk-In orders.

Activity 1: Online Orders page layout

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.
2. Click on the Page Layouts → click New.

3. Page Layout Name : Online Orders and click Save.

Create New Page Layout

[Help for this Page](#)

As an option, you may select an existing layout to clone. If you create a page layout without cloning, your page layout will not include the standard sections whose names are translated for your international users.

Existing Page Layout: --None--

5. Click **Save**.

Milestone 8 - Record Types

To Differentiate the records and data stored in Customer Accounts, let's create two different Record Types.

Online orders and Walk-In orders.

Activity 1: Online Orders Record Type

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.
2. Click on the Record Types → click New.

3. Enter Details :
Existing Record Type : Master
Record Type Label : Online Order
Record Type Name : Auto Populates
Active : Tick the checkbox
Click Next

This screenshot shows the 'New Record Type' form for the 'Customer Account' object. The form is titled 'Step 1. Enter the details' and 'Step 1 of 2'. It contains the following fields:

- Existing Record Type: A dropdown menu with '--Master--' selected.
- Record Type Label: A text field with 'Online Order' entered.
- Record Type Name: A text field with 'Online_Order' entered.
- Description: A text field.
- Active: A checkbox that is checked.

At the bottom, there is a note about 'Make Available' and 'Make Default' options.

4. In Assign Page Layouts
 - Select Apply one layout to all profiles : select **Online orders** from the drop down menu.

Select the page layout that users with this profile see for records with this record type. After saving, choose the picklist values that are available with this record type.

- ☒ Apply one layout to all profiles Online Orders ▼
- ☐ Apply a different layout for each profile

5. Click **Save and New**.

Activity 2: Walk-In Orders Record Type

1. Go to the setup page → click on object manager → From drop down click edit for **Customer Account** object.
2. Click on the Record Types → click New.
3. Enter Details :
Existing Record Type : Master
Record Type Label : Walk-In Order
Record Type Name : Auto Populates
Active : Tick the checkbox
Click Next
4. In Assign Page Layouts
 - Select Apply one layout to all profiles : select **Walk-In orders** from the drop down menu.
5. Click **Save**.

Milestone 9 - Validation Rules

Activity 1: On Employer Account

1. Go to the setup page → click on object manager → From drop down click edit for **Employer Account** object.
2. Click on the validation rule → click New.

SETUP > OBJECT MANAGER

Description:

Subject: Happy Birthday!

Email Body:

Dear {!Customer_Account__c.First_Name__c},

Happy Birthday from all of us at TheChaiShop&Co! 🎉🍰 We hope your special day is filled with joy, laughter, and wonderful memories.

To celebrate your birthday, we have a special gift just for you! As a token of our appreciation for your continued support, we're delighted to offer you an exclusive birthday discount.

🎁 Birthday Offer: Enjoy a fantastic 50% off on your next purchase as our birthday gift to you!

This offer is our way of saying thank you for being a valued customer. Simply use the code [HBDAY50] at checkout to redeem your birthday treat.

We hope this special offer adds a little extra sparkle to your birthday celebrations!

Once again, happy birthday! Thank you for choosing TheChaiShop&Co! and being part of our community.

Warm regards
TheChaiShop&Co!

The default workflow user is required for scheduled paths in record-triggered flows and time-dependent actions in workflow rules. If the user who triggered the automation is no longer active, the default workflow user is associated with the actions that are executed by the automation. The default workflow user always runs schedule-triggered flows.

Default Workflow User Sohan

By default, no email address is set for the Automated Process User. Event processes and autolaunched flows with triggers use the email address to send emails for actions and errors. Orchestrations use the email address to send notifications. To set the email address for the Automated Process User, specify an organization-wide email address for the system administrator profile.

Automated Process User Email Address

By default, the email approval sender is the approval submitter. To override the default sender, select an organization-wide email address.

Email Approval Sender Approval Submitter

Enabling email approval response lets users reply to email approval requests by typing APPROVE or REJECT in the first line and adding comments in the second line.

Enable email approval response

By enabling the email approval response feature, you agree to allow Salesforce to process email approval responses, update approval requests for all active users in your organization, and update the approval object on behalf of your organization's users.

Let users pause flows when they need to wait for more information. Once you enable this setting, the Pause button appears on every screen that has Pause enabled.

Let users pause flows

Let users resume interviews that are shared with them, either directly or via the role hierarchy. When disabled, interviews can be resumed only by the user who paused the interview or a flow admin who has view access.

Let users resume shared flow interviews

Flows launched from a URL or from Setup use the Lightning runtime experience instead of the classic runtime experience. Only Lightning runtime supports two-column flow screens, custom screen components, and local actions.

Milestone 11 - Flows

Let's create a scheduled Triggered flow to automate the Birthday offer mails.

Activity 1: Schedule Triggered Flow

1. Go to setup, Type Flow in quick find box → Click on the Flow and Select the New Flow.

Setup Home Object Manager

Flows

Flow Trigger Explorer New Flow

Flow Definitions

All Flows

41 items • Sorted by Flow Label • Filtered by All flow definitions • Updated a minute ago

- Click New Dashboards

Dashboard Name	Description	Folder	Created By	Created On	Subscribed
Customer Vs Enterprise Sales					
Enterprise Sales Report					

- Name : Customer Vs Enterprise Sales
- Click Create.

A screenshot of a 'New Dashboard' dialog box. The dialog has a title bar with a close button (X). Inside, there are three input fields: 'Name' (with a red asterisk), 'Description', and 'Folder'. The 'Name' field contains the text 'Customer VS Enterprise Sales' and is highlighted with a red rectangle. The 'Folder' field contains 'Private Dashboards' and has a 'Select Folder' button next to it. At the bottom right, there are 'Cancel' and 'Create' buttons, with the 'Create' button highlighted by a red rectangle.

5. Click Widget
6. Select Chart or Table.

A screenshot of a 'New Dashboard' dialog box. The dialog has a title bar with a close button (X). Inside, there are three input fields: 'Name' (with a red asterisk), 'Description', and 'Folder'. The 'Name' field contains the text 'Farmers with farms' and is highlighted with a blue selection bar. The 'Folder' field contains 'Private Dashboards' and has a 'Select Folder' button next to it. At the bottom right, there are 'Cancel' and 'Create' buttons.

7. Select Customer Account Sales Report

8. Display As : Select the one which you feel comfortable with.
9. Click **Add**.

The screenshot shows a report titled 'Report: Farmers with Farms' and 'Farmers with Farms Report'. It includes a table with the following data:

	Farmer: Farmer Name	Farm: Farm Name	Contact Number	Farm Size(Acres)	Farm Type
☐ Irrigation Type					
☐ Localized Irrigation (3)	Rajesh	Paddy Farm	999436770	10	Livestock
	Rajesh	Sugar Farm	999436770	10	Crop
	Kavase	Wheat Farm	788262778	15	Livestock
Subtotal				25	
Total (3)				25	

At the bottom of the table, there are checkboxes for 'Row Counts', 'Detail Rows', 'Subtotals', and 'Grand Total', all of which are checked.

10. Repeat the same steps for the Enterprise Account Sales Report.
11. Click **Save**.

Milestone 12 - Conclusion

In conclusion, the development of TheChaiShop&Co CRM application marks a significant stride in enhancing the store's operational efficiency and customer relationship management capabilities. Seamlessly integrating employer details, customer information (both online and offline), and enterprise data, this application streamlines business processes and enables informed decision-making. The automation of sales calculations, including order quantity and total bill amount, reduces errors and empowers employees to focus on delivering exceptional service. Moreover, automated email notifications for customers' birthdays foster personalized communication and enhance customer engagement.

7.FUNCTIONAL & PERFORMANCE TESTING

During the testing phase, screenshots were captured from the Salesforce Lightning interface to verify correct system behavior. These include:

- Record creation for Employer, Customer, and Enterprise objects
- Validation rule testing for Aadhar, PAN, and phone numbers
- Verification of record types and page layouts
- Formula field validation for order quantity and billing
- Flow execution for birthday email alerts
- Report and dashboard generation

Performance testing ensured fast response time and system stability during concurrent usage.

8. ADVANTAGES & DISADVANTAGES

Advantages

- Centralized data management
- Reduced manual work
- Automated calculations
- Improved customer engagement
- Real-time analytics

Disadvantages

- Requires Salesforce license
- Internet dependency
- Limited offline access

9. Conclusion:

- Helps manage customer information efficiently.
- Maintains customer and order details in an organized manner.
- Reduces manual work and saves time.
- Improves customer relationship and service quality.
- Makes sales and business data easy to access.
- Helps track customer orders and interactions.
- Improves overall shop management and productivity.
- Provides a simple and user-friendly CRM solution.
- Supports better decision-making for The Chai Shop & Co.
- Can be enhanced with more features in the future.

10. FUTURE SCOPE

- Mobile CRM integration
- AI-based sales prediction
- WhatsApp/SMS alerts

- Inventory management
- Multi-branch support
- Advanced customer profiling

11.APPENDIX

The appendix contains supporting information and resources used during the development and implementation of the **A CRM APPLICATION FOR THE CHAI SHOP & CO** using Salesforce.

A. Source Code

The project source consists of Salesforce configuration, metadata, custom objects, fields, relationships, workflows, validation rules, automation, reports, and dashboards developed for the **A CRM APPLICATION FOR THE CHAI SHOP & CO**

B. Dataset

The system uses agricultural data related to:

- CRM Records – CRM details, land information, and CRM Application activities.
- CRMS Records – CRM names, contact details, and related CRM information.
- Crop Records – Crop names, types, cultivation details, production information, and crop status.
- Buyer Records – Buyer details, contact information, and purchase-related records.

C. Tools and Technologies Used

- Salesforce Developer Org – Used for developing and configuring the application.
- Salesforce Objects and Fields – Used to store and organize agricultural data.
- Salesforce Flow/Automation – Used to automate repetitive processes.
- Reports and Dashboards – Used for data analysis and monitoring.
- Salesforce Lightning Experience – Used to create an interactive and user-friendly interface.

Thank You
